Announcements

Brigid Killelea Named Interim Director of Breast Center

I am pleased to announce that Dr. Brigid Killelea, MD, MPH, FACS, has accepted the position of Interim Director of the Breast Center at Smilow Cancer Hospital. Dr. Killelea succeeds Dr. Anees Chagpar, who has led the Center since 2010 and will continue caring for patients in the breast center and her leadership role as the Assistant Director of Global Oncology at Yale Cancer Center. During her tenure as Director, Dr. Chagpar built the foundation for the Center at Smilow. Her work advanced the level of care available to our patients

with breast cancer, and she was instrumental in the growth of clinical trials in the breast program at an unprecedented rate. The findings of her SHAVE trial, published in the *New England Journal of Medicine* in 2015, changed the standard practice of defining surgical margins for lumpectomies throughout the world.

A leading voice in the breast surgery community, Dr. Killelea joined Yale Medicine and Smilow Cancer Hospital in 2009, following completion of a dual fellowship in breast surgical oncology. She earned a Master of Public Health degree from Johns Hopkins University and received her medical doctorate from the University of Connecticut School of Medicine. I am confident that Dr. Killelea's achievements and reputation as a skilled and compassionate surgeon and effective administrator will ensure her success as Interim Director of the Breast Center.

Please join me in congratulating both Brigid for her new role, and

from the desk of

Medical Oncology and Hematology Fellows Graduate

It was a pleasure to celebrate the many accomplishments of our graduating class of fellows earlier this week. Educating our next generation of oncologists and giving them access to clinical care and basic and translational research opportunities is one of the most important missions of our Cancer Center. Under the leadership of Dr. Jill Lacy and Dr. Nikolai Podoltsev, our program continues to strengthen and their dedication to teaching was evident.

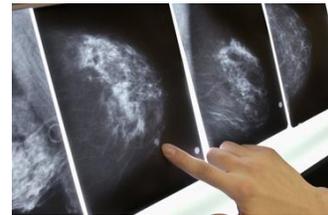

Dr. Lacy received the 2017 Annual David S. Fischer Teaching Award for Outstanding Teaching and Mentoring of Fellows in Medical Oncology

To kick off International Men's Health Week, we'd like to draw attention to the importance of prostate screening for men starting at around age 40, depending on risk factors. Other than skin cancer, prostate cancer is the most common cancer in American men, and the third leading cause of death in American men. Healthy screening habits are crucial to timely detection and effective treatment.

According to new studies recently presented at the annual meeting of the American Society of Clinical Oncology, just 25 minutes of walking per day can not only reduce cancer risk, but can also help patients who are going through treatment. One trial studied cancer patients and determined that 150 minutes of activity per week had a positive effect on both survival rate and the disease's progression.

Melinda Irwin, PhD, MPH, Co-Leader of the Cancer Prevention and Control Program at Yale Cancer Center, noted that "After treatment, weight loss is the most powerful thing you can do. It is the next best pill to treatment and it is free and has no side effects."

Members of Yale Cancer Center and Smilow Cancer Hospital recently traveled to Chicago to participate in the annual meeting of the

American Society of Clinical Oncology, which brings together over 30,000

member of the Genomics, Genetics and Epigenetics Research Program.

Maximilian Stahl, MD, a medical resident in Internal Medicine has earned a **Hematology Opportunities for the Next-Generation of Research Scientists (HONORS)** award from the **American Society of Hematology (ASH)**. His research, under the mentorship of Dr. Amer Zeidan and Dr. Steven Gore, is focused on outcomes and their predictors of immunosuppressive therapy in myelodysplastic syndromes.

Maggie Zampano, RN, OCN, MSCN, was awarded the **Joel Silidker Award** by the Department of Obstetrics, Gynecology & Reproductive Sciences in recognition of her dedication to the healthcare team and collaboration with her colleagues. The plaque reads, "Work hard, play hard every day. Cherish the joy in everything. Always smile."

Nadya Dimitrova, PhD, Assistant Professor of Molecular, Cellular and Developmental Biology and a member of Yale Cancer Center's Genomics, Genetics and Epigenetics Research Program, has been named a **Pew-Stewart Scholar for Cancer Research**. The Pew-Stewart Scholars Program for Cancer Research is a national initiative designed to support promising early career scientists whose research will accelerate discovery and advance progress to a cure for cancer.

Patrys Limited, a therapeutic antibody development company, has licensed from Yale University the worldwide rights to develop the novel lupus anti-DNA antibody 3E10 as a tumor-targeting agent. 3E10 is attracted to the DNA released by dying cancer cells and preferentially delivers conjugated drug-loaded nanoparticles to tumors. As the tumors respond to treatment they release more DNA, which attracts more 3E10-nanoparticles in a self-reinforcing cycle that significantly increases the efficacy of the drug therapy. Patrys will collaborate with Yale Cancer Center members and co-inventors, **Jiangbing Zhou, PhD** and **James Hansen, MD, MS** to further develop this technology.

Research in the News

Mammograms: Are we overdiagnosing small tumors?

An analysis of breast cancer data revealed that many small breast cancers have an excellent prognosis because they are inherently slow growing, according to Yale Cancer Center experts. Often, these cancers will not grow large enough to become significant within a patient's lifetime and subsequently

oncology professionals from across the globe to discuss the latest in cancer research and treatment.

Today, we host our 7th annual Yale ASCO Review to discuss the highlights from the conference.

Congratulations to Michael Cecchini, MD, and Brian Henick, MD, both recipients of the Conquer Cancer Foundation's 2017 Young Investigator Award. The Award exists to fund quality research and to assist young researchers in the transition from a fellowship program to a faculty appointment.

early detection could lead to overdiagnosis, said the researchers. In contrast, large tumors that cause most breast cancer deaths often grow so quickly that they become intrusive before they can be detected by screening mammography, they note.

The study, published June 8 in the *New England Journal of Medicine*, questions the value of breast cancer early detection.

Immunotherapy Combination Shows Promise in Early Stage Triple Negative Breast Cancer

A Yale Cancer Center clinical trial combining the immune checkpoint inhibitor (durvalumab/MEDI4736) with chemotherapy as preoperative treatment for early stage triple negative breast cancer disclosed a 71% pathologic complete response to the combination treatment in the initial phase I trial. By comparison, chemotherapies alone produce a pathologic complete response rate of only around 35-40% for women with triple negative breast cancer (TNBC).

"The preliminary efficacy result from a Phase I/II trial suggests very high activity, with a 71% pathologic complete response rate. This is important because women with breast cancer who achieve complete response have excellent long-term survival," said Lajos Pusztai, MD, lead author of the study.

Phase I Study Advances New Option for Urothelial Cancers

A recent study by Yale Cancer Center researchers revealed a 41% response to the antibody drug, enfortumab vedotin, by metastatic urothelial (mUC) tumors in a phase I clinical trial. Urothelial cancers include cancers of the bladder, ureters, and renal pelvis.

The phase I trial sought to determine the safety and tolerability of enfortumab vedotin, which targets the protein Nectin-4, in the treatment of advanced urothelial cancer. Overall, the study found that enfortumab vedotin demonstrated a favorable tolerability profile with encouraging anti-tumor activity in patients previously treated for mUC, including patients where prior immune checkpoint inhibitor therapies had failed.

Employee Profile: Tracy Mitchell

Tracy Mitchell, RN, is a nurse on the inpatient gynecologic oncology floor at Smilow. In this role, she also serves as a resource nurse, providing support and guidance to colleagues as needed, and rotates as a charge nurse, which requires her to oversee the day to day operations of the unit. She collaborates with the entire team to make sure the plan of care for patients is executed and that everything is running smoothly.

On average, patients spend 2-4 days in the unit and include breast and gyn/onc patients that have had surgery, and also overflow patients from medical oncology. Patients may also be receiving chemotherapy desensitization treatment or specialized radiation therapy, such as Iodine 131 or internal radiation therapy (brachytherapy), which require patients to be

admitted for up to two days. Tracy is there to make sure patients have what they need medically, and also assist with emotional support. She answers any questions and tries to ease her patients' fears.

"For a lot of our patients, this is their first step towards a diagnosis and treatment plan," said Tracy. "I don't think people realize just how much fear and worry there is, and how difficult it can be for both patients and the nurses trying to help them cope."

Cara Henderson, RN, BSN, CMSRN, Patient Service Manager at Smilow, commented, "Tracy Mitchell is one of our four resource nurses who acts as an extension of our leadership team. One of Tracy's greatest qualities is her attention to detail in assessing a patient's status. She is one of the most experienced nurses on the unit with a wealth of knowledge to share with others. We are lucky to have her."
